

Attachment of The Rollover

KeenCut Support – Classic Models

Choose one end of the Rollover and remove the two upper bolts of the end lids as shown in the picture.

The brackets are fixed with the attached, longer bolts at the existing holes for the end lids

Place the support shelf in the correct position on top of the brackets and fix with the bolts/washers/nuts.

The support shelf is now correctly attached to the Rollover and a KeenCut EVO3 cutter can easily be fixed on top using the pre-drilled holes
